BAD BOYS IN TUCSON

Burglarious Operations of a Gang of Incorrigibles.

Officers Kinney and Russell have placed themselves in touch with much or gang of bad boys, who have been systematically conducting a series of burglarious enterprises, with entire success in a financial way. There are now about eight or ten of them operating and even the day of their next meeting will be known to the city jail. The others probably soon will be.

Wednesday D. D. Horning, who conducted a feed store at the Lathrop corner, corner of Center and Jefferson streets, complained to the police that some one had entered his place and stolen a number of new grain sacks. Inquiry resulted in the knowledge that a boy with a checkered cap had been seen around there. Ben M. Farland was identified as the boy with the checkered cap and the conclusion was arrived at the more quickly for the reason that he has hitherto made the acquaintance of the officers in an official way. He was sent to the city jail and put through a course of questioning, to which he denied having stolen any sacks from Mr. Horning, but said he had stolen grain from the Arctic Oil Works and in Lanner's barn. He also revealed the identity of some other boys who probably have taken grain from Mr. Horning's place, as they had approached him after robberies that had occurred. Soon after young Farland and two other boys named Eugene and John Hayes were jailed. They were closely questioned and in turn told Horning regarding Ben's operations, but had little to say about themselves. Among the other boys given away by those arrested were Clarence Womsum, the two Basilio boys, and Buckley Mealy.

After they had all been given a full opportunity to talk freely, and their stories had been verified by visits to points of the plaza roofed, a partial list of their operations was summarized as follows:

The most skillful piece of work was at Walter Hill's warehouse, where the lads had tunneled under the building, and gaining an entrance had taken away a considerable quantity of bags and 52 grain sacks which had been bound. Then came the theft of the sacks in Mr. Horning's, Lanner's stable as well as easy; they went there frequently, or when they couldn't find a better place for operations. Grain sacks seemed to be their specialty, as they were readily converted into cash this season of the year.

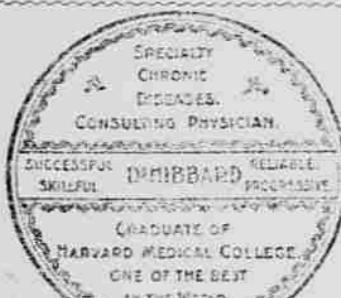

Ben told of two incidents which had been related by the other boys, of how they had entered two houses that happened to be left without an occupant for the time being, and that in each instance they snatched \$10 in cash. One of the houses is in the southern part of the city.

On another occasion, some of the boys while trilling down the alleys in the rear of George Loring's residence on West Washington street, saw a \$15 Smith & Weisert jeweler hanging his sandwich board near the back door. They managed to get hold of the weapon and buried it for a few days on the bank of the canal, and when they decided it would be safe they dug it up and sold it at R. Wilson's second hand store for fifty cents.

The rooms of Mr. and Mrs. Mosler, in the Dorris theatre, were entered recently and a watch and some money were taken. While there is no evidence yet connecting these boys with the crime, it is believed they are guilty, as

Cancers and Tumors Cured WITHOUT THE KNIFE

Dr. HIBBARD removes all growths by local medication. His method is safe, sure and successful. Numerous testimonials and specimens removed can be seen at office. The doctor makes a specialty of skin diseases, tumors, warts, moles, growths. The knife is a failure in a large percent of cases. Dr. Hibbard's method is a science. His method is rational and scientific. Thousands die annually from the knife because physicians as a rule do not understand the disease. They call it uncurable and if they do anything they resort to the knife. This is a remedy, a treatment without severe measures.

and with little or no suffering. Those who suffer from Diseases of the Sexual and Urinary Organs from contracted disorders and Seminal Weakness should at once recognize the serious results of such complaints. To such we offer the best and most scientific successful treatment. DR. HIBBARD, Hibbard Building, 28 South Second Avenue, Phoenix, Arizona. Consultation Free Hours 10-12-1-3-6-7.

Remember the gray horse in front.

Zola has a profound pity for human suffering. Women perplexes him. People have in this country that he must have had a most irregular existence to give such description as he does. He judge without knowledge, for understanding. Zola is a hermit, a contemplative monk. He married young, an ascetic青年. They have had no children. He knows nothing of family, which might have revealed to him the vertebral meaning of life. He never entered a church or met him who he has lived close within the four walls of his study. Illuminated by absolute imagination, he would have seen that life has more human impressions than ever in members that disgraces the individual church. When he had been in Paris, he had occupied four weeks in measuring the material for a picture and then in the next two weeks he expected to paint the soul of the Indian woman. He gives a posthumous a perfect picture, but it is safe to affirm that there is more realistic psychology in one page of Stendhal than in all Zola's works. The preparation for "Nana" was similar. Mr. Le Poer relates, Zola, unacquainted with the woman of Nana's category, was led about by a friend he dined and supped and made notes in the milieu where indications of the market are of more interest than sentimental matters—*Commercial Advertiser*.

It seems rather harsh to arrest boys of that age and throw them among the older and more vicious men in the city jail, but there is no other place to put them, and they ought surely to be baited in their mad race toward the penitentiary. Nearly all of them have been arrested before and their names consigned to their own sake. They have also been frequently warned from their conduct.

Use Cala Lily soap.

WEIL-BORING ENTERPRISE

For Development of an Increased City Water Supply.

It is a matter of general information that the supply of city water has been gradually shrinking for some months and some fears have been expressed that before the long summer is past it might shrink to a point where drilling would follow if a big fire should break out or other unusual demand be made.

While this is a matter of vital importance to the whole community the City Water company is of course the most directly concerned. For that reason the company has taken the necessary steps to develop an increased supply if possible, and it is generally believed that it is possible.

The well boring apparatus of W. D. Tanner is now at work "drilling" for water and its operations will be continuous for some time to come. The plan proposed by the water company is to sink three horse wells in line with the two big excavated wells now in use. An attempt will be made to reach a lower water vein in the hope that an inexhaustible supply will be encountered. Perhaps an artesian supply. Mr. Tanner, a few miles above, found a wonderful vein at something over 200 feet. If the same vein can be tapped by the city water company the supply will be abundant. But that vein is missed, and similar one may be found equally as good.

The first well, therefore, is to be largely for exploration purposes. After the desired depth has been gained, two other wells will be sunk to the depth deemed necessary by the results shown in the first well, and the three will be connected and it is advisable also will be connected with the two now in use. The first well, which is four feet in diameter, has been gained, two other wells will be sunk to the depth deemed necessary by the results shown in the first well, and the three will be connected and it is advisable also will be connected with the two now in use.

The first well, which is four feet in diameter, has been gained, two other wells will be sunk to the depth deemed necessary by the results shown in the first well, and the three will be connected and it is advisable also will be connected with the two now in use.

But there is every reason for believing that a big vein will be found in depth. In the Chacoan bore wells in Mesa, where there are three in a row, a proposed here, a flow of 215 inches has been secured, ample for the domestic purposes of a city of 50,000 inhabitants.

Ask for Mermaid Washing Powder. ZOLA, AGRICULTING TO THE ROCKS.

In the last lecture at the Chicago University, in presenting Zola as a writer, Mr. Le Poer showed the interpretation of a critic who absolutely disdained his countrymen and their productions. It was Zola, the optimist, who moved to Paris to participate in the life of a respectable French family. Here he sees it in every picture. I cannot admit that the history of my country is so fatidically recorded. Zola gives to his countrymen very little as individuality. It is in the treatment of the masses that he excels.

He is a master of the "great and important" side" of Zola's works. His pessimism and melancholy are, he confesses, contracted from French friends, which stays and haunts him in the future.

If you are of a more grateful disposition than your neighbor, don't take credit to yourself. It may be that you are older.

GOLD BEAR'S WIFE

Alfred Hemingway of Chicago, the partner of ex-senator Long, writes today: "A poorly dressed woman sat alone in a gateway station. Her name was called to her by a man, who she claimed, 'There's a place where you are welcome to eat breakfast. It costs 10 cents for tea. Wholly boiled. Presently I had a half full of coffee and announced: 'She has more than her fare, but not enough for a meal.' She made a face and I replied: 'That's all right. You're in the wrong house.' She said, 'She ought to have a home.' I replied: 'I'm afraid I have a better one.' When he asked me what the house was like, I said, 'It's a three-story brick building with the windows and curtains in the windows.'

"Why, friend, this place isn't a house," she said. "It's a den of iniquity." "What do you mean?" "I'm a prostitute."

"What else have to make money for one other fellow's wife?" "I'm a prostitute. That's the truth."

THE ERIE RAILROAD

Beginning on June 15th next, will inaugurate a new light freight service between Chicago, New York and Boston, leaving Chicago at 10:20 every morning and arriving in New York at 2:30 the next afternoon, with a Boston sleeper running twice the second evening.

Travellers riding east will find to this train everything that comfort and luxury can command. Platform cars, six passenger cars of the latest model, unexcelled dining car with modelled powdered dishes fast time over a track made perfect with road ballast and made safety the operation of the block signal and interlocking system.

If you have not seen the beautiful valley of the Susquehanna and Delaware River, you have missed one of the most delightful sections of the east. So save that you'll ride east via the Erie railroad.

There is nothing to pay sending out of your railway there in "rate" money.
